Migration Report Analysis Guide

Purpose: Review and approve setting-level migration classifications.

What You Are Reviewing

The migration report compares operation domain settings against enterprise.ad. Each setting has been pre-classified. **Your task is to validate or correct these classifications.**

Two Tabs Require Your Attention

Tab	Contents	Your Task
Settings_Analysis	All settings with classifications	Validate each classification
Review_Required	Conflicts only (pre-filtered)	Decide which value is correct

Note: The other tabs (Migration_Summary, GPO_Summary) are rollup summaries for reporting. They do not require direct review.

Understanding Classifications

Classification	What It Means	Visual Cue
• MIGRATE	Setting exists only in operation domain. Enterprise.ad does not have it.	Enterprise_GPO column is blank
• DON'T MIGRATE	Setting exists in enterprise.ad with identical value. Already covered.	Values match exactly
• REVIEW	Setting exists in both domains with different values. Decision required.	Values differ

Settings_Analysis Tab

This is your primary task list. Each row is one setting requiring validation.

Column Reference

Column	Description
`Classification`	Pre-assigned: MIGRATE, DON'T MIGRATE, or REVIEW
`Reason`	Why this classification was assigned
`Operation_GPO`	GPO containing this setting in operation domain
`Enterprise_GPO`	GPO containing this setting in enterprise.ad (if any)
`Category`	Setting type (SecurityOptions, AccountPolicies, etc.)
`Setting_Key`	Technical identifier
`Setting_Name`	Human-readable name
`Operation_Value`	Current value in operation domain
`Enterprise_Value`	Value in enterprise.ad (blank if not present)

Working Through Settings_Analysis

Filter the tab by Classification to work in batches.

Step 1: MIGRATE Settings

Filter: `Classification = MIGRATE`

For each row, answer: *Should this setting be migrated?*

```
Is this setting required for operation function?
    │
    ├── NO
    │   └── Change classification to "DO NOT MIGRATE - not needed"
    │       Document reason (legacy, deprecated, etc.)
    │
    └── YES
        │
        Should this be added to an existing EIT GPO?
            │
            ├── YES
            │   └── Note: "Add to [EIT GPO name]"
            │       Architecture will update enterprise standard
            │
            └── NO (operation-specific)
                └── Approve migration
                    Note target OU (Server, Workstation, User, Domain Root)
```

Step 2: REVIEW Settings

Filter: `Classification = REVIEW` (or use Review_Required tab)

For each row, compare Operation_Value vs Enterprise_Value:

```
Is the operation value intentionally different?
    │
    ├── YES (documented business requirement)
    │   └── Change classification to MIGRATE
    │       Document justification
    │
    ├── NO (should use enterprise standard)
    │   └── Change classification to DON'T MIGRATE
    │       Confirm operation can adopt enterprise value
    │
    └── UNSURE
        └── Flag for follow-up (with Operation)
            Note both values and question
```

Step 3: DON'T MIGRATE Settings (Spot Check)

Filter: `Classification = DON'T MIGRATE`

These require no action. Optionally verify:

- Is the Enterprise_GPO listed correct?
- Does that GPO link to appropriate OUs for this operation?

If something looks wrong, flag for investigation.

Example: Settings_Analysis Rows

Classification	Operation_GPO	Enterprise_GPO	Setting_Name	Op Value	Ent Value
MIGRATE	SBT-Print-Policy		Default Printer	\\steamboat\lobby	
DON'T MIGRATE	SOL-Security	EIT - Security Baseline	Min Password Length	14	14
REVIEW	WP-Account-Policy	EIT - Account Policy	Lockout Threshold	3	5

Row 1 (MIGRATE):

Steamboat print setting. Enterprise_GPO is blank—this setting only exists in Steamboat.
→ *Decision: Is \\steamboat\lobby still needed? If yes, approve migration to appropriate OU.*

Row 2 (DON'T MIGRATE):

Solitude password length matches enterprise. No action needed.
→ *The EIT - Security Baseline GPO already handles this.*

Row 3 (REVIEW):

Winter Park uses lockout of 3, enterprise uses 5.
→ *Decision: Is 3 intentional? If yes, migrate. If no, accept enterprise value of 5.*

Review_Required Tab

This tab is Settings_Analysis **pre-filtered** to `Classification = REVIEW` . Use it for focused conflict resolution.

Column Reference

Column	Description
`Operation_GPO`	GPO in operation domain
`Enterprise_GPO`	GPO in enterprise.ad with different value
`Category`	Setting type
`Setting_Key`	Technical identifier
`Setting_Name`	Human-readable name
`Operation_Value`	Value in operation domain
`Enterprise_Value`	Value in enterprise.ad
`Reason`	Conflict description

Resolving Conflicts

For each row, you must decide:

Decision	Meaning	Result
Keep operation value	Business requires this specific value	Reclassify as MIGRATE
Accept enterprise value	Operation should standardize	Reclassify as DON'T MIGRATE
Escalate	Need more information	Flag for follow-up (with Operation)

Example: Review_Required Rows

Operation_GPO	Enterprise_GPO	Setting_Name	Op Value	Ent Value
SOL-Security	EIT - Security	Screen Lock Timeout	900	600
WP-Firewall	EIT - Firewall	RDP Port	3390	3389
SBT-Account	EIT - Account Policy	Max Password Age	180	90

Row 1: Screen Lock Timeout

Solitude uses 900 seconds (15 min), enterprise uses 600 (10 min).

- If Solitude workflows require longer timeout → **MIGRATE**
- If no business reason → **DON'T MIGRATE** (adopt 600)

Row 2: RDP Port

Winter Park uses port 3390, enterprise uses 3389.

- If non-standard port is intentional security measure → **MIGRATE**
- If legacy configuration with no purpose → **DON'T MIGRATE** (adopt 3389)

Row 3: Max Password Age

Steamboat expires at 180 days, enterprise at 90.

- If compliant and preferred → **MIGRATE**
- If must match enterprise policy → **DON'T MIGRATE**

Recording Your Decisions

Add columns to track your review:

Column	Purpose	Example Values
`Final_Classification`	Your decision	MIGRATE, DON'T MIGRATE, ESCALATE
`Target_OU`	For MIGRATE items	Server, Workstation, User, Domain Root
`Notes`	Justification or questions	"Required for POS systems"
`Reviewer`	Who reviewed	Your name
`Review_Date`	When reviewed	2025-12-19

Target OU Reference

Setting Applies To	Target OU
Servers only	Server OU
Workstations only	Workstation OU
Users only	User OU
All computers	Domain Root or Computers OU
Specific subset	Dedicated OU with filtering

Deliverables

After completing your review, provide:

Item	Include
✅ Approved MIGRATE settings	Target OU noted
✅ Changed to DON'T MIGRATE	Justification documented
✅ Changed to MIGRATE (from REVIEW)	Business reason documented
⏸ Escalated items	Specific questions for Operation

Summary Tabs (Reference Only)

These tabs are for reporting purposes and do not require direct review:

Tab	Contents	Use Case
Migration_Summary	Totals for MIGRATE, DON'T MIGRATE, REVIEW	Executive reporting
GPO_Summary	GPO-level rollup with priority	Planning workload
